

# Choosing The Right Size Ceiling Fan For Your Room

1

## STEP ONE

### Determine the square footage of your room.

Measure the length and the width of the room and then multiply. For example, 12 feet long x 10 feet wide = 120 square feet.

2

## STEP TWO

### Have a tall or cathedral ceiling?

Many Kichler® ceiling fans work with 8 or 9 foot ceilings. If your ceiling is higher, you'll need a downrod. The rule of thumb is that fans should have a minimum of 7 feet of clearance between the bottom of the fan blades and the floor in order to circulate the air efficiently.

## STEP THREE

### Determine the size fan you need:
